ELECTRIC SCHOOL BUSES, TECHNOLOGY HIGHLIGHT NAPT TRADE SHOW

November 8, 2017 Written by [Claudia Newton](#) Published in [News](#) [DISQUS_COMMENTS](#)

Another national trade show has come and gone, with school bus manufacturers and suppliers headed to their respective corners of the country, but not before showing their wares to hundreds of student transporters in Columbus, Ohio.

Below are just some of the many products and solutions on display from more than 100 exhibitors at Tuesday's National Association for Pupil Transportation Summit Trade Show.

AMF-Bruns of America

www.amfbrunsamerica.com

AMF-Bruns of America exhibited wheelchair restraints designed to protect special needs school bus passengers in the event that a bus suddenly stops and/or is in a collision. The company said that by touching and feeling the actual restraints used on buses, show attendees learn how their restraints meet all applicable industry safety and quality standards. AMF-Bruns restraints possess unique features such as self-tensioning or fully-automatic pull-outs, low profiles and foot release levers, and availability in different anchorages. AMF-Bruns of America has provided vehicle technology for wheelchair passengers for nearly 60 years.
