### eFutureSafe

The newest member of the AMF-Bruns of America family is the eFutureSafe Head & Backrest/Seatbelt Anchorage system, which allows customized head, back and neck adjustments. No more twisting and turning for maximum relief! The patented design of the eFutureSafe can withstand 15G rear collision forces and 20G frontal collisions. eFutureSafe is easy to install, move and clean. When it's not in use, it can be turned inward toward the vehicle wall to save space. The system can be side mounted or floor mounted, and it's compatible with AMF-Bruns restraint systems.
